

Work Report: Sunday, Oct 4, 2026

Member: **Carl Gemuel Taberna (GitHub: Aelowww)** · Project: Teech · Source: commits on `main`, Philippine time (UTC+8)

At a glance: 10 commits on Oct 4 (13:26 to 23:43), plus 1 follow-up at 00:10 on Oct 5. 104 files touched, +7,146 / -2,082 lines. All of it is on `main` and `live`.

- Built the **admin console** and the **student and faculty ID verification** flow.
- **Set up email (QA bug):** the app now sends verification-decision emails through Gmail SMTP, and branded templates were added for every auth email.
- Added **6-digit email code verification** at sign-up for students and faculty.
- Replaced security-question recovery with **password reset by email**.

1. Email setup: QA bug fix

Problem: after an admin approved or rejected an ID, the user was supposed to get an email, but none arrived. The email route (`/api/admin/verification-email`) needed a Resend API key and sender domain, and without them it quietly returned `not_configured` and sent nothing. Emails that did go out were plain and unbranded, and the sign-up code flow had problems: old codes stopped working with no explanation, and users could keep pressing "resend".

What was done:

- **Switched delivery to Gmail SMTP** using `nodemailer` (`1c1462f`). New settings `SMTP_HOST`, `SMTP_PORT`, `SMTP_USER` and `SMTP_PASS` (a Gmail app password) went into `.env.example`, and Resend was removed. Emails are sent as "Teech <account>".
- **Branded HTML email layout** (`7fed467`): Teech logo, card layout and button for the "You're verified" and "We couldn't verify your ID" emails. The rejection email shows the admin's reason and an "Update my details" button. Added `teech_logo_email.png`.
- **Supabase auth email templates** (`ba07e6d`, `7fed467`, `1c1462f`): confirm sign-up (with the 6-digit code), change email, and reset password, all in the same branded style.
- **Sign-up email code flow** (`fb0ea9c`, `38ac827`): a new reusable code popup (OTP modal) for student and faculty sign-up, mobile and desktop. Resend is locked for 60 seconds with a countdown. The popup explains that only the newest code works and that it can take a minute to arrive. The code field clears on resend.
- **Clearer message for unconfirmed emails:** signing in before confirming now tells the user to go back to Sign up for a new 6-digit code.
- **Migration order fix** (`d76a9ef`, `23:43`): `doj1666`'s fix for the admin email lookup used migration number `...000300`, which `admin_console` already uses, so the database could skip or reject it. Renamed it to `...000800` so it runs after the function it fixes and the verification-email lookup works.

Status: **Committed and live on main.** For emails to send in production, the four `SMTP_*` values have to be set in Vercel.

2. Other work that day

Admin portal and ID verification (13:26, `44dea33`)

- Admin sign-in at `/admin` with password plus authenticator-app 2-step verification.
- Students and faculty upload a photo of their ID. New verification screens and ID upload field (mobile and desktop).
- Faculty can't sign in until an admin approves them. The app routes users by verification status (`proxy.ts`).
- Password reset by email (`resetPasswordForEmail`), a new `/auth/confirm` route for email links, and the first version of the verification-email API.
- Database migrations: `admin_identity_verification`, `sign_in_with_id`, `faculty_id_documents`.

Admin console dashboard (14:00, `79074a7`)

- New admin console layout: sidebar shell, live dashboard with a bar chart, and separate **Students** and **Faculty** verification queues.
- Moved the sign-in and sign-up logic into `lib/auth-flows.ts` and `lib/admin.ts`. Migration `admin_console`.

Simpler student sign-up (14:19 to 14:27, `664d075`, `ba07e6d`)

- Students now sign up with only name, email and password, then submit their Student ID, department and ID photo inside the app. Booking unlocks once an admin approves (migration `student_identity_after_signup`).

- Accounts created before the change were marked as already verified so current users aren't locked out (migration `exempt_existing_accounts`).

Faculty sign-up with email code (15:05 to 15:15, `1c1462f` , `fbeea9c`)

- Faculty sign-up now uses the same 6-digit email code as students, on mobile and desktop.

Cleanup and verification notifications (15:33, `a99d5aa`)

- Removed the old security-question recovery: questions page, recovery reminder and security-settings section. Email reset replaces it. This removed about 1,100 lines.
- Users get an in-app notification when their ID is approved or rejected, and can resubmit after a rejection (migration `verification_notifications`). Help-chat answers updated to match.

Follow-up just after midnight (Oct 5, 00:10, `d1c66e3`)

- The admin console now asks for confirmation before signing out.
- Confirmation popups that ask you to type a word keep the confirm button disabled until the word is typed, instead of showing an error.

3. Commit log

Time	Commit	Summary	Files	+ / –
13:26	<code>44dea33</code>	Admin portal, ID verification, password reset by email	65	+4145 / –386
14:00	<code>79074a7</code>	Admin console dashboard and verification queues	23	+1522 / –103
14:19	<code>664d075</code>	Student ID submitted after sign-up	19	+492 / –156
14:27	<code>ba07e6d</code>	Exempt existing accounts; confirm-signup email template	5	+78 / –3
14:43	<code>7fed467</code>	Branded verification emails and auth email templates	5	+147 / –13
15:05	<code>1c1462f</code>	Email sent through Gmail SMTP (nodemailer); faculty email code	15	+191 / –40
15:15	<code>fbeea9c</code>	Reusable code popup (OTP modal) for sign-up	12	+305 / –262
15:33	<code>a99d5aa</code>	Removed security questions; verification notifications	30	+242 / –1112
15:38	<code>38ac827</code>	Code popup: 60s resend countdown, "newest code only" note	2	+24 / –6
23:43	<code>d76a9ef</code>	Fixed migration order for the admin email lookup fix	1	rename
00:10 (Oct 5)	<code>d1c66e3</code>	Admin sign-out confirmation; confirm-button behaviour	13	+18 / –21

Two more commits at 14:32 (`2eb0eac` on `design` , `24c4065` on `features`) only removed AGENTS.md and CLAUDE.md from those branches, repeating a cleanup already on main. They are not in GitHub Insights and are not counted.
