

Teech: Contributor Report

Repository: github.com/Aelowww/Teech · Branch: **main** (the branch GitHub Insights counts) · History covered: Sep 18 to Oct 5, 2026 · Generated Oct 5, 2026

How the counting was done

- **Scope = GitHub Insights.** Only non-merge commits on `main` count (80 in total), which is what Insights → Contributors shows. Commits that exist only on the `design`, `desktop`, `features` or `security` branches are left out.
- **Duplicate commits are not counted.** Twelve commits are exact copies of another commit (same diff, same author, same timestamp). They came in twice through branch merges. Each change is counted once.
- **Commits that changed nothing in the live app are not counted.** This covers a delete-then-restore pair that cancels out, and small commits that a later commit fully overwrote, so none of their code is in the current live build.
- **"Lines in live code"** is the number of lines in the current `main` (deployed to teech-app.vercel.app) that each person last wrote, measured with `git blame`. Generated or asset files (`package-lock.json`, SVG and PNG images) are left out, and whitespace-only changes are ignored.
- *Carl Gemuel Taberna* and *Aelowww* are the same GitHub account (same email). *Shirozou* committed under two email spellings, which are combined here.

1. Summary

Member (GitHub)	Commits on main	Not counted	Counted commits	Lines in live code	Share	Share of live code
Carl Gemuel Taberna (Aelowww)	54	9	45	18,706	43.3%	
anniesrdnl	17	8	9	13,527	31.3%	
Shirozou	5	2	3	8,511	19.7%	
AlykSanFR	2	0	2	2,131	4.9%	
doj1666	2	0	2	311	0.7%	
Total	80	19	61	43,186	100%	

Almost every commit message is "Initial commit", so the summaries below come from reading each commit's diff.

2. Contribution by member

Carl Gemuel Taberna (Aelowww) 45 counted commits Sep 18 to Oct 5

Role in the repo: project owner. Set up the codebase, the database and the backend, then built most of the features and the deployment setup.

- **Project setup and docs (Sep 18 to 26):** README, architecture diagram, the Next.js + Supabase base app, and the first student pages (sign in, create account, faculty list, calendar, booking, appointment requests).
- **Faculty side and booking logic (Sep 27):** faculty pages (availability, requests, profile), booking review, cancelling appointments, and database migrations that prevent double booking and add appointment codes, rooms and slot reservations.
- **Mobile app and gamification (Sep 28 to 29):** moved the app into a `/mobile` layout, added the auth callback and loading screen, then badges, login streaks, points shop, badge showcase, notifications feed, account deletion and the welcome screen. Renamed the 22 Supabase migrations into timestamped order.
- **Help chat and security (Sep 29):** built-in help chat with canned answers and a Gemini fallback (`/api/support`), the animated writing logo, time-slot helper, and security-hardening migrations (private avatars, security answers and check-in points fixes).
- **Requests and presence (Sep 30):** request status tabs, faculty presence status (available or busy), student avatars visible to faculty, and desktop polish (fact cards, splash screen, faculty home).
- **Loading screens and UX fixes (Oct 1):** new app loader and loader logo, cleaned-up skeleton screens, success modals across forms, app icons, desktop `loading.tsx` pages, recovery reminder, profile and tip UX, Vercel ignore file, logging for help-chat AI failures, README rewrite and the "Teech" site title.
- **Admin console and identity verification (Oct 4):** see the separate report "Work Report: Oct 4, 2026". In short: admin portal with 2-step sign-in, live dashboard and student and faculty verification queues; ID upload and verification flow; password reset by email; 6-digit email code at sign-up; branded emails sent through Gmail SMTP; Supabase email templates.
- **Late Oct 4 / Oct 5:** fixed the order of a teammate's migration and added sign-out confirmation to the admin console.

anniesrdnl 9 counted commits Sep 30 to Oct 2

Role in the repo: UI and visual design for both the mobile and desktop layouts.

- **Mobile UI redesign (Sep 30):** new button and CTA-link styles, nav icons, kite icon, notification bell, redesigned notifications feed, login streak card, support-chat styling and the app loader.
- **Profile and request screens (Sep 30):** profile overview, personal info, change-password form, sign-out-everywhere, avatar uploader, badge grid, request tabs, and the appointment-request list and detail pages.
- **Badge showcase and modals (Sep 30):** showcased-badges component, a redesigned confirmation modal, styling for the faculty presence selector, and the appointment detail layout.
- **Desktop redesign (Sep 30):** a large pass over the desktop components (app shell, auth screens, backdrop, badges, buttons, fact card, login streak, points shop, personal info and more), plus redesigned student and faculty home pages.
- **Live data and animation (Sep 30):** realtime refresh helper (`lib/supabase/realtime.ts`), count-up number animation, desktop faculty-list and appointment-info pages.
- **Desktop polish (Oct 1):** desktop page skeletons, an updated app loader, profile overview, and refreshed styling for fact cards, badges and modals.
- **Small mobile UI fix (Oct 2):** UI and faculty-home styling tweak.

8 of the 17 commits are exact duplicates (each change was committed twice with the same timestamp) and are counted once.

Shirozou 3 counted commits Sep 30

Role in the repo: built the desktop layout.

- **Desktop layout foundation:** the `layout-switch` that picks the mobile or desktop layout for each device, the desktop app shell and auth frame, and desktop versions of the app's components and pages (about 8.7k lines added).
- **Desktop features:** booking steps, points shop, badges, help chat, notifications, profile settings, request tabs and the shell profile, all for desktop.
- **Mobile loading skeletons:** skeleton components and `loading.tsx` screens for the mobile pages. Part of this was later replaced, but about 450 lines are still live.

2 of the 5 commits are exact duplicates and are counted once.

AlykSanFR 2 counted commits Oct 1

- **Badges and streaks redesign:** new badge-medal component, a reworked badge grid and badge icons, a redesigned login-streak card, and the showcased-badges component, for both mobile and desktop.
- **Points shop and UI updates:** points-shop redesign, shared UI component updates, and small fixes across the request, calendar and booking pages.

doj1666 2 counted commits Oct 1, Oct 4

- **Help chat fix (Oct 1):** one shared question-length limit (300 characters) for the API and both chat inputs, and error messages shown to users only for rate limits.
- **Faculty ID upload and admin email fix (Oct 4):** faculty IDs are now uploaded under the owner's account after the email code is confirmed (new storage-policy migration), the auth flow was updated, and a migration fixes the email type in the admin contact lookup that the verification emails depend on. Also small edits to the email templates.

3. Commits not counted (19)

Commit	Author	Date	Reason
5e81dfa d553e47 0e197ba fcecff7 313114d 998a3c3 3787878 8d14a4c	anniesrdnl	Sep 30 to Oct 1	Exact duplicates of 4dab3dd, 300ef9f, b5b7a9d, c100f77, b2c69f1, 5e4fb5b, da9e393, 1618cf3
cba148b 37134cb	Shirozou	Sep 30	Exact duplicates of 5e8ea0f, 33b1a3d
f7c8ff5 2583e82	Carl G. Taberna	Sep 30	Exact duplicates of 41660e6, 7079368
b225181 + 4df96a3	Carl G. Taberna	Oct 1	Deleted 26 files, then restored them 4 minutes later. No net change.
7079368 daa3588 3b6c90b	Carl G. Taberna	Sep 30 to Oct 1	Fully overwritten by later commits. None of their code is in the live build.
041822c ea96372	Aelowwww	Sep 18	README edits fully overwritten later

No member's commit was a copy of a different member's commit. All 12 duplicates are the same person's change entering `main` twice through branch merges.
